SLOW TRACK™
ST-601
ANTI-SLIP ADDITIVE
FOR FLOOR COATINGS

DESCRIPTION:
SLOW TRACK is a polymeric grit coating additive designed to prevent slippery conditions if the floor seal is expected to become wet or oily. SLOW TRACK can be easily mixed into both waterborne and solventborne seals, and will not settle out to the bottom.

Note: SLOW TRACK in a previously applied coating might contribute to slight foaming in a sealer or finish applied over it. Subsequent coats should be applied smoothly with minimal agitation of the sealer/finish.

DIRECTIONS:
Porous surfaces should be sealed first before application of a coating with SLOW TRACK. This is to ensure there will be enough coating on the surface to help encapsulate the SLOW TRACK.

Mix SLOW TRACK into the seal and stir thoroughly. For waterborne coatings, add 200 grams SLOW TRACK per gallon of seal. For solventborne coatings, add 100 to 200 grams of SLOW TRACK per gallon of seal. For best results and for even distribution of SLOW TRACK particles in the final finish apply a medium coat of the sealer with a roller. Apply the sealer as evenly as possible. Frequent mild stirring of the sealer mix is recommended during application. SLOW TRACK may rise to the surface over time.

An additional thin coat of seal without SLOW TRACK may be applied over seal with SLOW TRACK to help trap the grit in the seal and to provide easier cleaning. However, slip resistance may decrease as a result.

SPECIFICATIONS:
COLOR: .................................. White Powder
ODOR: .................................... Mild
DOSAGE (recommended):
    Solventborne coatings .......... 100 grams per gallon of seal
    Waterborne coatings .......... 200 grams per gallon of seal
FLASH POINT: ........................... >450 °F (ASTM D-92 COC)
VOLATILE CONTENT: ............... Zero
SPECIFIC GRAVITY: .................. 0.95
PACKAGE SIZES: ...................... One 200 gram container (good for 1-2 gallons)
                                 One 1000 gram container (good for 5-10 gallons)
